JLUFE Spring 2021 (Feb-July) Final Assignment Report JILIN UNIVERSITY OF FINANCE AND ECONOMICS Department of College of Managment Science and Information Engineering information management and information system (2021)Final Assignment: Part 02 21/06/2021 MODULE: Data Mining Submitted by: John (刘强) <u>0314021805412</u> (1854) QQ: <u>2546235153</u> Github ID: <u>18744042967</u> Lihua(李盛港) <u>0314021805401</u> (1854) QQ: 1257943075 Github ID: lihua2048

Instructions:

- 1. I have added tips and required learning resources for each question, which helps you to solve the exercise.
- 2. Finish the assignment in group of two students (Any group find copying/sharing from another group or internet will get '0' points!!!)
- 3. Open the assignment from the <u>Github Clasroom link (https://classroom.github.com/a/yFXO50A4)</u> This will create private repository of the assignment in your Github account.
- 4. In your repository Clone -> Download ZIP in your computer.
- 5. Change your: Major, Name, Student number, Class number, QQ number and GitHub ID
- 6. Once you finish the Assignment <u>convert your .ipynb file into PDF</u>

 (https://github.com/milaan9/91_Python_Tips/blob/main/000_Convert_Jupyter_Notebook_to_PDF.ipynl
 (both .pynb and .pdf file will be required!)
- 7. Create Folder name "Solution" and copy your 3 files:
 - A. Your Jupyter Notebook file (.ipynb).
 - B. Your PDF converted file (.pdf).
 - C. .**zip** file containing both .ipynb and .pdf files and name your .zip file as your student number and name. For example: **0318021907632 Milan(米兰).zip**
- 8. Finally, in your repository Add files -> upload files upload the "Solution" folder and Commit changes.

Python Assignment 02

Question: Hangman Game

Write a python program to create a Hangman game.

About Game: Going back to our old school days, some of the pen-paper games were always a top for our leisure time. In Hangman user has to guess words according to the guesses determined and as soon as they lost all their wrong guesses, they were hanged (not really, but on paper (3)). In the game of Hangman, the player only has 7 incorrect guesses (head, body, 2 legs, and 2 arms, hang) before they lose the game.

Structure:

- In Part 1, you will require to load a random word from a <u>dictionary</u> (https://github.com/milaan9/92 Python Assignments/blob/main/sowpods.txt).
- 2. In Part 2, you will require the logic for guessing the letter and displaying that information to the user.

After completing part 1 and part 2 you will need to add the following features:

Features:

- Only let the user guess 7 times, and tell the user how many guesses they have left. Example: "You have 6
 quesses left!"
- No restriction in uppercase and lowercase letters.
 - Example: user can guess "a" and it will be equal to "A" or vice-versa.
- If user guesses a numbers or a special characters, don't penalize them ask them again to choose only letter.
 - Example: user guess "9" or "?" then ask user again to choose a letter.
- If the guess letter appear more than one time in the word display it.
 - Example: Word is "Apple" and user guess the word 'p' so --> __ P P __ __
- Keep track of the letters the user guessed incorrectly. If the user guesses a letter they already guessed, don't penalize them let them guess again.
- Display some picture art for the Hangman. This is challenging do the other parts of the exercise first!
- When the player wins or loses, let them start a new game.

Expected/Similar Output:

Welcome to Hangman!

Guess one letter at a time
Game is not case sensitive
What is your guess?: a
A A
What is your guess?: 9
Please chose just a letter: e
e is not in this word!
e is not in this word:
<u> </u>
V., h., 6 , 1-f+1
You have 6 guesses left!
your previous wrong guesses: ['E']
A A
What is your guess?: e
You have already guessed e!
Tou have affeaty guessed c.
A A
What is your guess?: h
h is not in this word!
. 10 100 11 01120 10110
You have 5 guesses left!
your previous wrong guesses: ['E', 'H']
your previous wrong guesses. [E, n]
A A
What is your guess?: d
d is not in this word!
a is not in this word:
1 / 1
You have 4 guesses left!
your previous wrong guesses: ['E', 'H', 'D']
your previous wrong guesses. [E, II, D]
A A

```
What is your guess?: b
b is not in this word!
      0
     /|\
You have 3 guesses left!
your previous wrong guesses: ['E', 'H', 'D', 'B']
__ A __ A __ __
What is your guess?: k
K A __ A __ _
What is your guess?: r
K A __ _ A R __ _
What is your guess?: t
t is not in this word!
      0
     / \
You have 2 guesses left!
your previous wrong guesses: ['E', 'H', 'D', 'B', 'T']
K A __ A R __ _
What is your guess?: 1
l is not in this word!
      0
You have 1 guesses left!
your previous wrong guesses: ['E', 'H', 'D', 'B', 'T', 'L']
K A __ A R __ _
What is your guess?: p
p is not in this word!
```

You have 0 guesses left!

You lose!

your previous wrong guesses: ['E', 'H', 'D', 'B', 'T', 'L', 'P']

The word was ['K', 'A', 'N', 'G', 'A', 'R', 'O', 'O']

Would you like to play again? [y|n]: n

In [1]:

```
▼ # Solution:
  import random
